6. The following is an examiner's statement of reasons for allowance:

In interpreting the claims, in light of the specification and the applicant's arguments filed on 02/07/2005, the Examiner finds the claimed invention to be patentably distinct from the prior art of record.

Himmel et al. (US 6,324,566), teach one or more searchable repositories of bookmark sets are stored in a computer system, wherein a search query from a client containing a set of keywords is received, the stored bookmark sets are searched for one or more bookmark sets associated with at least one keyword matching a keyword from the search query, and a list of bookmark sets which satisfy the query are returned to the client browser.

The prior art of record teaches the claimed invention substantially, but it fails to teach or suggest individually or in combination that a system and method for search websites associated with bookmarks comprising: ***providing a user interface of a web browser to allow users to access the search engine, the web browser to be run on either of the first and the remote computer systems for: inputting a search term to***

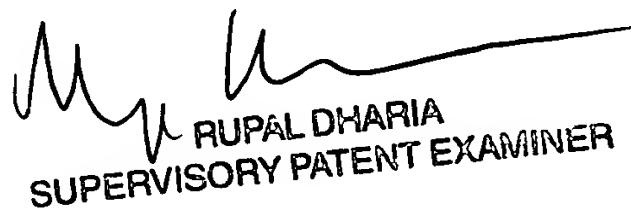

cause the search engine to perform a search using the search term; inputting an identifier of the remote computer system; making a selection to cause websites associated with bookmarks stored on the first computer to be searched; and making a selection to cause websites associated with bookmarks stored on the remote computer system to be searched as set forth in independent claim 1. Claims 1-2 and 23-27 are allowed because of the combination of other limitations and the limitation listed above.
